

# SHAKOTAN HUT KEROSENE STOVE INSTRUCTIONS

**STEP 1** – Open the kerosene tank valve, turning the knob vertical.

**STEP 2** – Depress the 'Reset' switch down. You'll feel a 'click', and when you let go, the lever will return to its original position.

**STEP 3** – Turn the dial to 1. This will cause a very small amount of kerosene to start leaking into the stove.

**STEP 4** – Open the small cover to the ignition hole, light a match, and put the burning end of the match inside the ignition hole, up against the nozzle to the right of the entrance, inside the stove.

**STEP 5** – Close the ignition-hole cover and enjoy. Increase the heat slowly, leaving about 1-2 minutes between each increase in number on the dial.

**To extinguish the stove**, turn knob all the way clockwise, pull the Reset switch up, and return the kerosene tank valve to horizontal.
